Materia

Stock Taking Simplified

Material Management Tool for Manufacturers | Retailers | Contractors

Smart BOQs/BOMs

Easy generation of Bill of Quantities /
Bill of Materials document

- List out all the building materials to be used for a proposed project, estimate the total cost of project phase wise

- Materials can be grouped task wise

- Rates of the materials changes dynamically and it can edited to incorporate current market rates

Project Planning & Execution

- Project can be split into sub-projects

- Can define start, end dates

- Email / SMS Alerts to the management if any sub-project goes beyond timelines

Materia | Stock Taking Simplified

Comprehensive Building Material / Inventory Database

- Comprehensive BuildPrebuilt Indian building material database

- Materials can be added category wise (Electrical, Civil, Plumbing etc)

- Ability to edit materials prices easily

Client Management

- Add new clients and projects under each client

- Multiple projects under each client can be managed

- Documents pertaining to each project can be stored securely under respective project folder

Materia | *Stock Taking Simplified*

Efficient Inventory/ Material Management

Complete Control of Inventory at project sites

- Site supervisor raises request for material

- POs issued by Management to suppliers for the requested material

- Site supervisors need to raise GRN (Goods Received Note) when the material is delivered by construction site

Materia | Stock Taking Simplified

Tracking material delivery at project site

- Specifics of the delivery like material name, quantity delivered, supplier invoice are captured in the application

- Builder/Admin alerted whenever material delivered at the construction site (SMS/EMAIL)

Materia | *Stock Taking Simplified*

Track material consumption on daily basis

- Site Supervisor needs to submit daily consumption report

- Report details the exact amount of each building material consumed for that day

- Comparison of consumption with the BOQ value for that specific sub-project

- SMS/Email Alerts to Builder/Manager when the actual consumption is more than what's decided in BOQ
